

ROCK ENGINEERING BOOK

Arild Palmström and Håkan Stille

Contents

About the authors	vii
01 Introduction	1
References	6
02 Geology in rock engineering	7
2.1. Geological setting	7
2.2. Rocks	16
2.3. Discontinuities	22
2.4. Groundwater	30
2.5. The use of a geological model	34
References	36
03 Investigations and measurements	39
3.1. Investigation strategy	39
3.2. Field investigation methods	49
3.3. Laboratory methods	83
3.4. Cost aspects of ground investigations	89
References	96
04 Derived ground information and location of the project	99
4.1. Layout and requirements of the project	99
4.2. Combination of the investigation results	101
4.3. Geological uncertainties	112
4.4. Selection of the project location	117
References	119
05 Ground behaviour	121
5.1. Rockmasses	121
5.2. Effect of stresses	130
5.3. Effect of groundwater	131
5.4. Effect of the size and shape of the excavation	131
5.5. Effect of the excavation and installation of the rock support	135
5.6. Types of ground behaviour	137
5.7. A method to identify ground behaviour	143
References	148
06 Ground conditions and properties	151
6.1. Ground parameters	152
6.2. Typical ground parameter values	152
6.3. Rockmass conditions	154
6.4. Rock stresses	170
6.5. Conditions related to groundwater	174
6.6. Weakness zones and faults	178
6.7. Some empirical equations to estimate rockmass properties	178
References	190
07 Rock engineering design tools	193
7.1. Rock design principles	194
7.2. Calculated solutions	198
7.3. Observational methods	213
7.4. Empirical methods	219
7.5. Practical use of the Eurocode	238
References	245

08	Rock engineering in planning	249
	8.1. Rock engineering procedures	250
	8.2. Underground projects and quality.....	256
	8.3. Risk management	259
	8.4. Estimation of time and cost	264
	8.5. Design principles of some special tunnel projects.....	279
	References.....	291
	Further reading.....	293
09	Rock engineering and excavation	295
	9.1. Some excavation principles	295
	9.2. Some rock support methods.....	301
	9.3. Water sealing and principles.....	317
	9.4. Investigations during tunnel excavation.....	328
	9.5. Excavation follow-up and tunnel mapping	332
	9.6. Determination of rock support at the site	337
	9.7. Monitoring during and after excavation.....	340
	9.8. Case histories.....	346
	References	359
	Appendix	363
	A.1. Various measurements of block volume and degree of jointing	363
	A.2. Details on empirical rock engineering tools	369
	A.3. Compilation of the input parameters to the RMR, Q and RMI systems	411
	A.4. Engineering geological field observations and prediction of ground conditions	425
	References	430
	Index.....	433
